

Big Data Protocol

Overview

LaunchPool is distributing the BDP tokens to people staking diverse tokens.

Required Assets

BDP can currently be farmed with:

- WBTC
- WETH
- USDT
- USDC
- OCEAN
- LINK
- SUSHI
- UNI
- YFI
- AAVE
- SRM
- TOMOE

Links

Farming: <https://vfat.tools/bdp/>

Strategy Description

As their frontend is quite buggy, we advise to use Yield Farming Info instead.

```
UNI Price: $28.76 Market Cap: $28,760,000,000.00
Staked: 1552268.9700 UNI ($44,643,255.58)
BDP Per Week: 2486400.00 ($12,581,674.26)
APR: Day 4.03% Week 28.18% Year 1465.50%
You are staking 0.00 UNI ($0.00), 0.00% of the pool.
A Stake 0.00 UNI
B Unstake 0.00 UNI
C Claim 0.00 BDP ($0.00)
Staking or unstaking also claims rewards.
```

A. Stake

Click on “Stake” and sign the transaction(s) (the first time there will be 2 TX the first one being an approve TX).

B. Harvest

Click on “Claim” and sign the transaction.

C. Exit

Click on “Unstake” and sign the transaction.

Yield

This strategy produces yield due to the BDP rewards.

Risk Disclosure

There are the following risks:

- **Staking contract breaking:** Big Data Protocol contracts look pretty standard. However there is always smart contract risk.
- **Frontends:** The frontend could be hacked or changed by the team making them do different actions than those explained in this strategy including stealing user funds. Always verify that the transactions are approving and interacting with the right contracts.
